

**City Wide Antiseptic Cleaning - Call (801) 983-7474 for help. If outside of normal business hours, select option 8 or 9 which will reach someone on call 24 x 7**

It is estimated that the coronavirus can survive on hard, non-porous surfaces for 24-48 hours; and on cloth, paper and tissue for 8-12 hours.. Thus many objects can potentially spread the virus. If a healthy person touches a contaminated object or surface, they can transfer the virus to their mouth/nose/eyes.

The virus can contaminate a variety of objects. It can live for as long as 2 days on hard surfaces. Obvious examples of shared objects include telephones, sinks, toilet flush buttons, kitchen utensils, door handles, computer equipment (keyboard and mouse), photocopiers/printers, light switches, temperature controls, handrails etc.

Viruses are destroyed by most detergents and disinfectants. They are also readily inactivated by heating and drying. Disinfectants that are effective on the coronavirus include:

- - Plain soap
- - Any detergent
- - Bleach
- - Alcohol-based disinfectant solution

During an outbreak, regular cleaning and disinfecting potentially contaminated surfaces and objects will lower the risk of disease transmission.

### **Shared Areas**

All areas of buildings that may be occupied at different stages by various individuals or groups, including but not limited to such areas as; Reception, Meeting Rooms, Dining Areas, Coffee Docks, Restrooms, Corridors, Stairwells and Elevators.

Areas and surfaces should be wiped, at a minimum, at least daily. Where practical to do so, by providing disinfectant wipes, the items should be wiped in between use by different persons, or as soon as they may become contaminated.

### **Emergency Sanitizing Service**

We will wipe and sanitize all horizontal and vertical non upholstered touch surfaces: desks, chairs, cabinets, tables, equipment, key boards, phones (exclude TVs and Monitors), door knobs/handles, doors, touchable interior glass, light switches, rails, buttons, kitchen appliances, mounted and free standing dispensers, fitness equipment, sinks, restroom fixtures including toilets, sinks, showers, dispensers - up to 6 feet. This excludes cleaning floors, windows, interior glass and windows (that are not touched) which are a separate service.

We will use hospital grade cleaning agents (ours or your required solutions). This service is available by the area and building type.

**Electrostatic Spraying Service** - see separate document.

**Call (801) 983-7474 for help. If outside of normal business hours, select option 8 or 9 which will reach someone on call 24 x 7.**

## ELECTROSTATIC SPRAYER SERVICES

Disinfecting and sanitizing surfaces can be challenging in office buildings and commercial spaces. For places with sensitive equipment, a variety of surface materials, or a high probability of contamination, electrostatic sprayers may be the perfect option.

This new technology is an advanced sprayer system that ensures effective, uniform coverage of surfaces in all types of environments.

The sprayer negatively charges the solution, driving the chemical to a neutral (grounded) surface. The charge difference means that the surface actually attracts the negatively charged droplets, similar to the sprayers used in some automotive and commercial painting methods.

Hard to reach areas are covered in a thin layer of solution, creating quicker dry times while continuing to disinfect long after application. This service is also safe on sensitive equipment and electronics, making it perfect for any type of facility, including offices, schools, medical, manufacturing, and hospitality environments.

While it might just look like a high-powered sprayer, the technology makes this service extremely effective. The electrostatic sprayer can cover 10,000 sq. ft. per hour, quickly eradicating germs, viruses, and bacteria, as well as preventing mold and mildew on surfaces. Flu season is an optimal time to protect your office, but this technology can be used anytime to stop the spread of an outbreak.

Contact City Wide today to learn more about this innovative sprayer technology and how you can keep your work environment healthier, thus reducing employee absenteeism and increasing productivity.

Ask your City Wide contact for more information.

### Ideal Building Types

- ◆ Athletic Facilities
- ◆ Commercial Offices
- ◆ Daycare Centers
- ◆ Food Service
- ◆ Medical Facilities
- ◆ Multi-Housing Common Areas
- ◆ Schools
- ◆ Senior Living

### Fields of Use

- ◆ Disinfection
- ◆ Mold Remediation
- ◆ Odor Elimination

### Outbreak Prevention

- ◆ Influenza
- ◆ MRSA
- ◆ Norovirus
- ◆ Many Others
