HARD SURFACE FLOOR CARE

Your floors are a long-term investment. Our simple steps for floor care ensure we keep levels of dirt low and your hard surface floors looking their best. One of City Wide's biggest secrets to success is our continuous attack on dirt.

We review many preventative measures to maintain your hard flooring, leaving them looking great without increasing costs.

City Wide recommends placing at least 10 feet of matting at every entry point, as this can collect over 85% of walked-in dirt. Vacuuming daily ensures the dirt in your mats and carpets does not move on to your hard floors, where it is more visible and can be tracked further into your building.

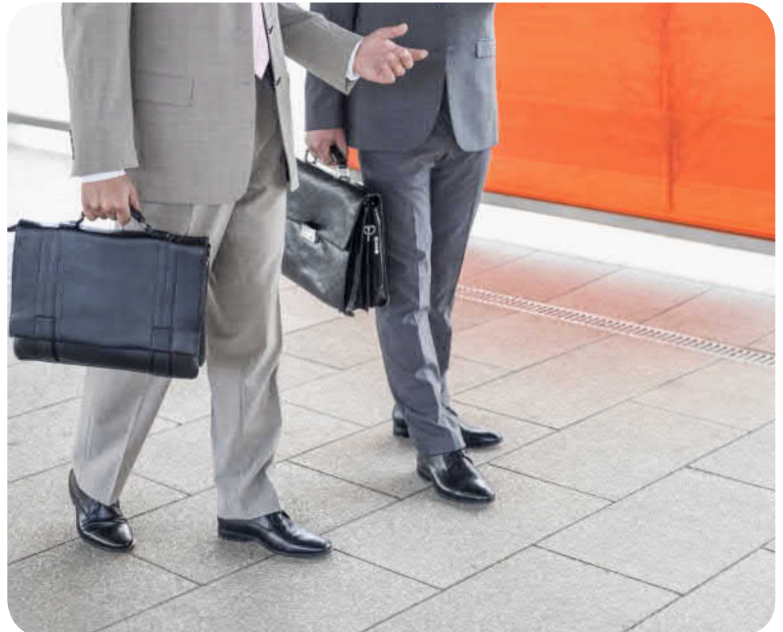

High traffic areas like break rooms and entryways should be scrubbed and waxed on a regular basis. Periodic care will remove build-up and keep your floors looking beautiful, longer.

Even with the most attentive periodic care, hard surface floors need to be stripped and waxed regularly to extend their life and keep them looking their best. Stripping and refinishing your hard floor surfaces can restore the look and feel of an entire office space and bring new life to the workplace.

Contact City Wide today for a total floor care and building assessment.
