PRESSURE WASHING

Ask your City Wide contact for more information

You know how efficient pressure washing can be in removing dirt and grime. Maybe it's a service you've used before, after long accumulation has left black and rust-colored streaks below your gutters and in the splash zone around your foundation.

Make pressure washing a regular part of your building maintenance program to save time and money down the road.

Here are three reasons you should schedule pressure washing services every year, instead of every now and then:

1. Pressure washing removes mold and mineral buildup on exterior surfaces before it can get established and cause long-term damage.

2. Pressure washing is safe and cost-effective. Professional pressure washers who use high-temperature and eco-friendly cleaning methods simplify annual cleaning.

3. Your building's exterior is the first thing a visitor sees! Don't discount the impact of a first experience on a potential customer.

Pressure washing can extend the life of many building finishes. It's not just for concrete – some of the surfaces that can be cleaned with pressure washing might surprise you!

Ask City Wide how to add pressure washing into your annual maintenance schedule today!
